# AI attacks move in seconds. You need protection that can keep up.

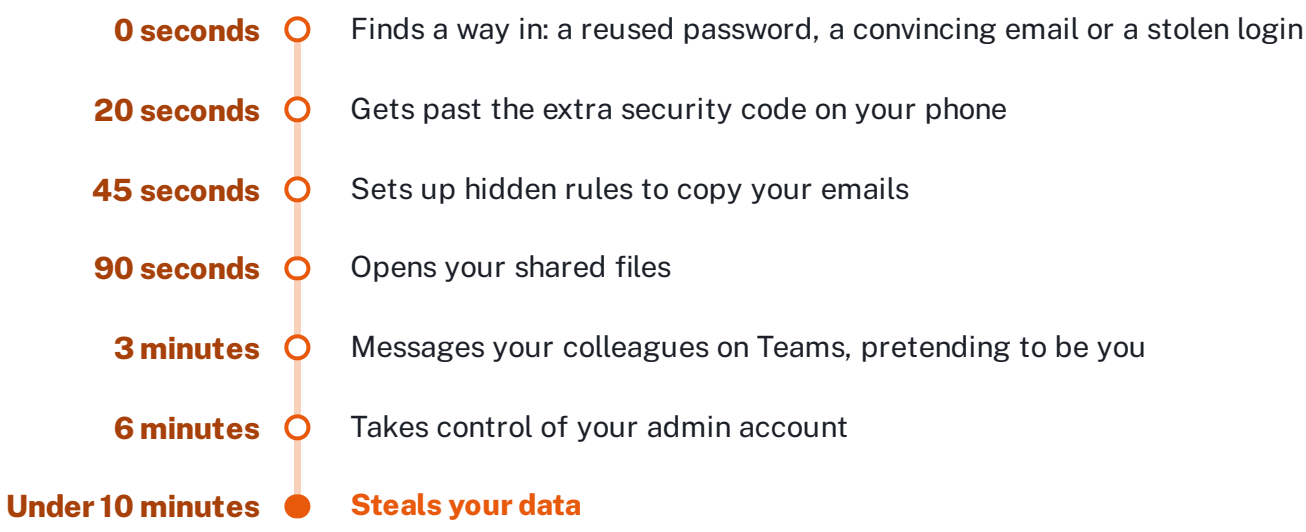

[SERVICE NAME]: using AI to stop AI attacks in seconds, 24/7

More and more attacks are now run by AI agents that work at machine speed, around the clock. These agents can break in, look around, and take what they want, all without a person at the keyboard.

Threats have changed. Your protection needs to change, too.

## An AI attack takes less than 10 minutes

Here's how quickly one stolen login can turn into a serious problem:

## Why small businesses are now in the line of fire

1 in 3

SMBs were attacked in the last year

26%

Of SMBs think they are too small to be targeted

Source: Microsoft Security & Bredin, SMB Cybersecurity Research

Small businesses think they're safe from cyber threats because they aren't worth an attacker's time. For AI agents, time isn't a limiting factor.

AI agents can target thousands of businesses at once. They don't care how big you are. Even the smallest of payouts add up across dozens of SMBs.

## Why speed is everything

Traditional security monitoring relies on people to read alerts, investigate and decide what to do. That takes time. Against an AI attacker that works in seconds, you can't afford to wait.

The only way to fight AI agents is to use an agent yourself.

[SERVICE NAME]:

- ✓ Acts the moment something looks wrong
- ✓ Seconds to contain
- ✓ 24/7/365
- ✓ Checks every signal across your environment and connects the dots

## What happens when you're attacked

Our AI-powered security service acts in seconds, ensuring you're protected against today's AI threats.

Seconds

The attacker is automatically cut off, the account is locked, and any phishing emails are removed from your employees' inboxes.

>

Minutes

You get the full attack story with no jargon: the email clicked, what was touched, how the threat was stopped and when.

>

Hours

We close the gap that let them in so it doesn't happen again.

## Fight AI with AI

AI attackers are already out there. To stop them fast enough, you need an agent on your side. [SERVICE NAME] uses AI to watch, decide and act at machine speed – with our security team overseeing it every step of the way.
